

Proactive Insect Control Products

COVERT[®] INDOOR FLY TRAP

With Patented Controlled-Release Technology

- A major breakthrough in indoor fly management. *The best indoor trapping system on the market ...incorporating the additive effects of both UV and chemical lures. Now using long-lasting LED technology.*
- Scientifically developed with proven attractant technology to lure and kill many types of indoor flies. *Patented controlled-release chemistry lures work with UV light to achieve unsurpassed effectiveness.*
- Discreet, wall-mounted design creates an indoor light appearance and allows for trap placement in public areas.

Proven Innovation... Proven Results

FOR RESTAURANT AND FOODSERVICE TRADES

- The patented controlled-release chemistry also enables the trap to work without the UV light...24 hrs a day.
- The ventilated, open-top design disassembles for easy maintenance and cleaning.
- Operating area coverage of approximately 1000 square feet with the basic model. Effective coverage area is increased to over 2000 ft² with the “open front grill”, 12 Watt LED model.
- Traps have CE certification, equivalent to UL and CSA certification.

COMPACT AND LIGHTWEIGHT DESIGN

- Basic trap dimensions are only 15" Width x 5" Height x 5" Depth. Open front grill model is 19.5" W x 9" H x 5" D. Easily mounts to any wall or vertical surface.
- Weight is only 1.4 to 1.6lbs.
- Ventilated, open-top design allows for easy maintenance and cleaning.
- Low operating costs...basic design requires one 6 Watt LED strip.
- Also available in an “open grill” front panel configuration with a 12 Watt LED strip for increased UV visibility and chemical lure attraction. This design provides increased effectiveness for food or animal production facilities.
- Traps include six controlled-release lures and six glueboards...a six month to one year supply, depending on your location. These items are also easily re-ordered when required

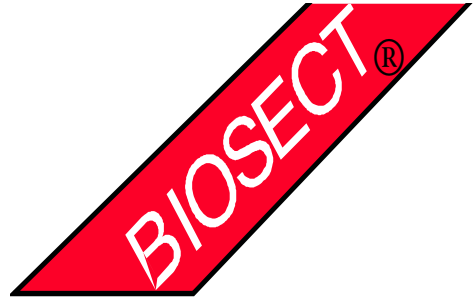

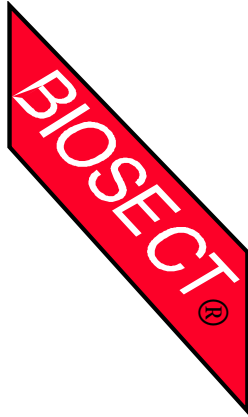

Extensive Experience From Biological Weed Control To Development Of Monitoring And Trapping Systems For Indoor Fly Control

**Providing effective and
responsible insect control
products designed with people,
pets, and the environment in
mind.**

Demonstrated leadership in the development of non-toxic, environmentally responsible insect control systems. This experience and expertise is now available to home consumers, industrial, and agricultural end-users. Individually, as well as through affiliation with leading universities, Biosect Research has been involved in Integrated Pest Management (IPM) for over twenty five years. The result is an advanced product line for indoor fly control, mosquito management and repellency, and wasp or yellowjacket management. In addition to current product innovations, ongoing research ensures continuous improvements and leading product developments.

Providing Over Twenty Five Years Of Integrated Pest Management Leadership
